Fei-Fei Li is a Chinese-American computer scientist who was born in China in 1976 (nineteen seventy-six) and thinks that the field of AI is growing fast, but that there aren't enough researchers in the field. She believes that AI should be included in our life and would bring change to the world.

She has then on worked with that idea on mind and established ImageNet in 2020 (twenty-twenty), a tool designed to test computer vision models based on images.

She is a professor at Stanford University and has also worked on AI applications in healthcare. She is passionate about diversity in technology and in 2017 (twenty seventeen), she co-founded AI4ALL, a non-profit organisation that promotes diversity and inclusion in the field of artificial intelligence.

Her research is focused on artificial intelligence, deep learning, machine learning, computer vision and cognitive neuroscience.

She has received many honors throughout her life and was named one of the most influential Asians by Gold House. Moreover, Fei-Fei Li is also part of the UN Scientific Advisory Board.

This scientist has brought several advancement in the world of technology and through the means of education, she is determined about the idea of making AI more diverse.
